What is Gold Filled?

(GB909)

Gold filled jewelry contains a layer of Karat Gold mechanically bonded to a layer of bronze (or other supporting alloy) before being rolled or drawn to the desired thickness.

The item maintains the same gold content throughout our signature production process. ARC Traders' gold filled products contain either 12 or 14 Karat gold. For example, the GB909 (1 x 21 mm twist tube) contains a layer of 12 Karat Gold bonded to a bronze alloy layer.
